

OnTrack

AI Productivity App for Students

This project was developed by a team of five UI/UX trainees as part of the Digital Egypt Pioneers Initiative. It aims to help university students manage time, stay focused, and build consistent study habits using AI-powered features.

Project Summary

OnTrack is a mobile application designed to help university students effectively manage their time, stay focused during study sessions, and build consistent academic habits. The application leverages AI-powered features to provide personalized assistance, making studying more structured and less overwhelming.

Concept

The concept behind OnTrack is to unify multiple productivity tools into one seamless experience. Instead of switching between apps for tasks, timers, and motivation, students can rely on a single platform that integrates task management, focus sessions, AI guidance, and gamification to support their academic journey.

Problem

Research indicates that a large percentage of university students struggle with time management, constant distractions (especially from mobile devices), and lack of motivation. Additionally, many students rely on multiple disconnected tools, which creates inefficiency and cognitive overload.

Goal

The goal of this project is to design an intuitive and user-friendly mobile application that simplifies productivity. The app aims to help students organize their workload, improve concentration, reduce stress, and develop long-term productive habits through a guided and motivating experience.

Target Users

The primary target users are university students aged 18–24 who face academic pressure, multiple deadlines, and difficulty maintaining focus. These users are digitally active and prefer simple, fast, and effective solutions.

Solution

OnTrack offers a comprehensive solution that includes a task management system, an AI-powered assistant for planning and prioritization, a focus timer based on the Pomodoro technique, a progress tracking system, and a rewards system that encourages consistency through gamification.

Design Decisions

The design follows a minimal and clean UI approach to reduce cognitive load and distractions. Warm colors such as yellow and orange were used to evoke energy and motivation. A strong visual hierarchy ensures clarity and ease of navigation, while mobile-first principles guarantee accessibility and usability.

Outcome

The project resulted in a complete mobile application design, including multiple screens such as task management, AI assistant, focus mode, and analytics. Additionally, a landing page and a design system were created to ensure visual consistency and scalability.

Conclusion

OnTrack transforms the traditional studying experience into a structured, engaging, and motivating journey. By combining productivity tools with AI and gamification, the app helps students achieve better academic outcomes while maintaining balance and reducing stress.
